Environment Section

"Take the necessary steps to issue a bond for flood control of the most affected areas of the County, including stormwater management issues that add to the flooding problems. The bond issue would permit steps to reduce the impact of flooding, restore creeks and areas of watersheds where development has added to the flooding potential downstream. A 20 year bond issue would permit pay-off at current rates of interest and would improve conditions of safety and health for citizens now affected by flooding, poor drainage and pollutants in streams."
